Voltus
Backend Software Engineer

March 7, 2024

To Hiring Manager,

I am writing to express my interest in the Backend Software Engineer position at Voltus. With a strong background in backend and fullstack development, I am excited about the opportunity to contribute to Voltus's mission of optimizing energy usage and empowering businesses to make smarter energy decisions.

During my 4 years of industry experience, I have successfully designed and developed large-scale applications, collaborating closely with clients and engineers to deliver solutions that meet their specific requirements. As an Intermediate Software Developer at Clir Renewables, I worked closely with the engineering team to enhance the capabilities of software used for wind turbine data analysis. I provided valuable insights and implemented features that improved data visualization and user experience. My experience in collaborating with multidisciplinary teams and translating complex technical requirements into practical solutions makes me well-prepared to contribute to the development and maintenance of the Voltus's ecosystem.

Proficient in Python and experienced in Go, I possess in-depth knowledge of backend technologies. I have a strong ability to work with APIs and Microservices, delivering rapid prototypes and driving software development excellence. I am also experienced in Postgres and Docker.

I have attached my resume for your review, which provides further details of my qualifications and experiences. I would welcome the opportunity to discuss in more detail how my skills align with the requirements of the Backend Software Engineer position at the Voltus. Please feel free to contact me at your convenience to schedule a conversation.

Thank you very much!

Joey Parker
